in Finland

DIGITA

Sustainable Data Center Services in Finland

We provide comprehensive data center solutions, co-location, connectivity, network, security, and cloud services. We have sustainable data center environments with a high level of energy, security, and privacy requirements. Our prime offering is private, secure and reliable data center co-location.

Our data center locations offer excellent international and domestic data connections with more than 20 telco operators present. On top of the co-location, we can build network, security, and hybrid cloud solutions to our customers. Our customers, who are critical to the security of supply, have requested the highest level of confidentiality that we can implement if requested.

Our Data Centers

Pieni Paja	Iso Paja	TV Tower	Lahti TV Tower
Capacity 1 MW	Capacity 500 kW	Capacity 1 MW	Capacity 100 kW
Total Area 1150 m²	Total Area 142 m²	Total Area 364 m²	Total Area 120 m²
Redundancy Power N+1 UPS + diesel generator	**Redundancy Power** 2N UPS + diesel generator	**Redundancy Power** 2N UPS + diesel generator	**Redundancy Power** N+1 UPS + diesel generator

Sustainability
District cooling system, waste heat is recycled in full scale.
Pieni Paja is energy efficient and has environmentally friendly design (Design PUE<1,2).

Excellent connectivity in revolutionary location in the communication hub in Helsinki	Sustainable, energy efficient solutions	Complete operations with 24/7 SOC, remote hands services with decades of experience.	24/7/365 access to the premises	Excellent customer satisfaction, score 4.6 (scale 1-5)

Our Services

Colocation

Our data center colocation service provides secured, sustainable and compliant solutions fulfilling the latest modern data center requirements.

Colocation services

- Full racks
- 24/7/365 service operations center
- Option to fulfill power supply requirements.
- A power supply of up to 11 kW per rack
- Option to bring your own racks
- Dedicated space or your own cage

Connectivity

Digita's Pasila data center campus is located right in the heart of Helsinki. The campus is a hub with the best connectivity and peering options internationally and domestically. The hub is located on the FICIX Helsinki IXP (Internet Exchange Point) and Netnod Internet Exchange (IX) is. With more than 22 telco operators enables the lowest latency route to Nordics and Central Europe.

Remote Hands

With our Remote Hands service, we can provide the best technical expertise for the customers to do any new implementations, changes or other work that require local presence.

The service includes

- SLA is one (1) hour.
- Technical presence in the data center
- Technical fault repair service
- Hardware installations and configurations
- Equipment rack installations
- Hardware component installations and removals
- Reception of hardware deliveries
- Hardware inventories
- Maintenance of wiring installations
- Wiring client hardware to enclosures
- Cross connections
- Hardware transfers in and between Data Center rooms
- Visual authentication
- Secure storage services

Hybrid Cloud

We build cloud services both in Finland and elsewhere in the world. We can combine capacity, security, and public cloud services into a Hybrid Cloud service in a secure manner. This is particularly important for our customers critical to security of supply. In our cloud services, we take advantage of the proximity of the local location and the scaling possibilities of public cloud. This allows us to nimbly change our customers' services to meet their current business needs.
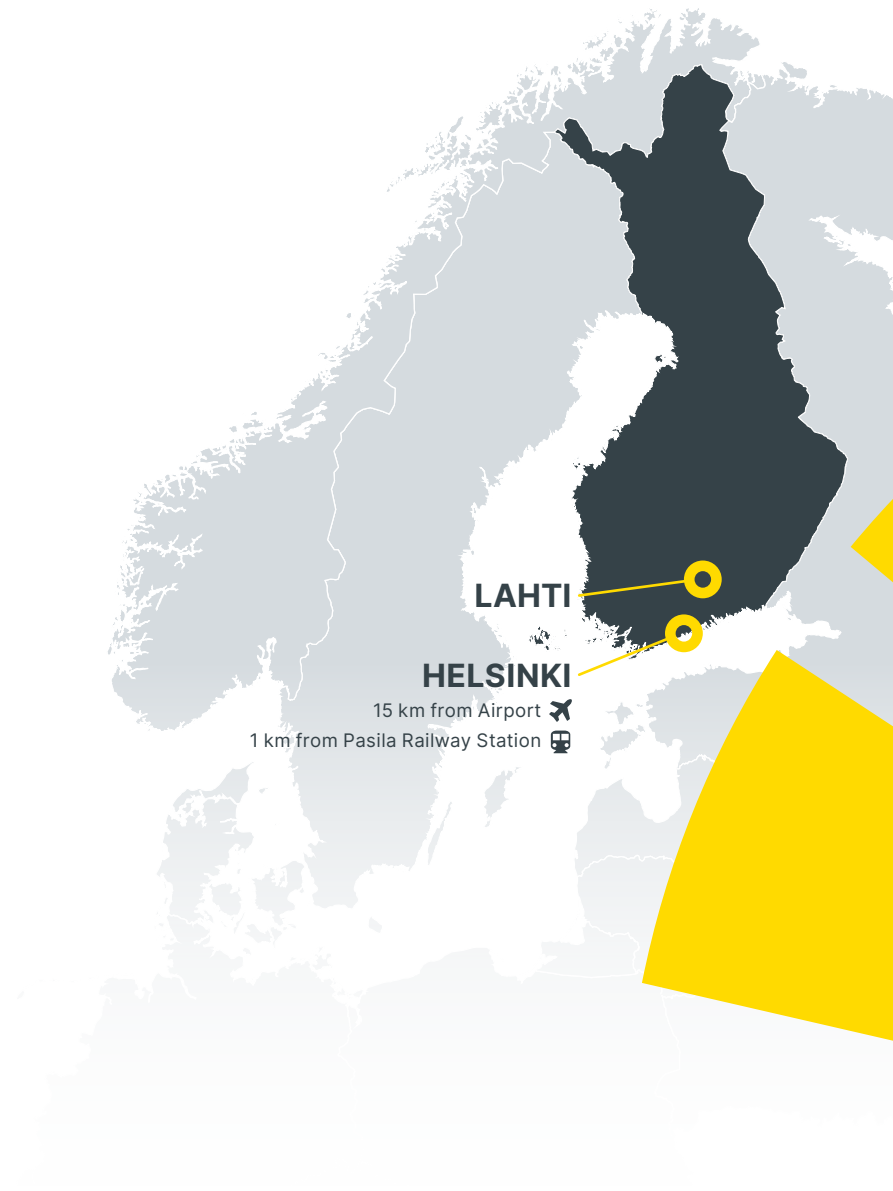

Security

We provide dedicated, customer specific security services and solutions in our data centers when you need to protect your data, any devices, connections.
