Sustainable Data Center Services in Finland

DIGITA

Sustainable Data Center Services with the best connectivity in Finland

We offer comprehensive data center solutions, including co-location, connectivity, and remote hands services. Our sustainable data centers meet high standards for energy efficiency, security, and privacy. We specialize in providing customized, secure, and reliable data center services tailored to individual customer needs.

Partnering with almost 30 telecom carriers, we offer excellent network connectivity and fast connections to the most important internet traffic hubs and networks.

Our data centers are located close to Central Europe with excellent data connections. We offer our customers connections with low latency, high availability, and multiple alternative routes using sea and land connections.

Our Helsinki Data Center Campus

Digita Data Center 1	Digita Data Center 2
Capacity 800 kW	Capacity 1.2 MW
Total Area 506 m²	Total Area 1150 m²
160 racks	250 racks
Redundancy Power N+1 UPS + diesel generator	**Redundancy Power** 2N UPS + diesel generator

Sustainability
District cooling system, waste heat is recycled in full scale. Digita Data Center 2 is energy efficient and has environmentally friendly design (Operational PUE currently < 1.2).

Over 20 years' experience in Data Center business and operations	Currently 2 separated data center premises in the data center campus	A secure and central service campus in the heart of Helsinki	Our established services offer data center co-location, connectivity, and remote hands.
Close to 30 connectivity options in a prime location within Helsinki's communication hub.	Sustainable, energy efficient solutions	Complete operations with 24/7 NOC, remote hands services with decades of experience	24/7/365 access to the premises	Excellent customer satisfaction, NPS +100

Our Services

○ Colocation

Our data center colocation service provides secured, sustainable and compliant solutions fulfilling the latest modern data center requirements.

Our services include

- data center capacity in a dedicated full, half, or quarter rack
- 24/7/365 monitoring for customer equipment by our network operations center
- possibility to use your own racks
- dedicated, separate space and lockable cage for safety

○ Connectivity

Digita's Pasila data center campus is located right in the heart of Helsinki. The campus is a hub with the best connectivity and peering options internationally and domestically. The hub is located on the FICIX 2 Helsinki IXP (Internet Exchange Point), Netnod Internet Exchange (IX), GlobalNet, Equinix Internet Exchange Helsinki and Global Peer Exchange.

A network of nearly 30 different carriers enables high-speed connections and extremely low-latency routing to the Nordic and Baltic countries, and to the rest of Europe.
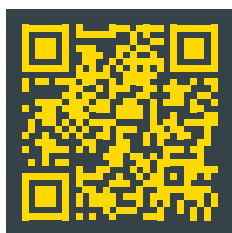

○ Remote Hands

We offer our customers on-site technical specialist work and support at the data center for equipment installation, production environment changes, fiber optic cable work, and other tasks required by our customers. The tasks are handled by Digita's own experienced staff, available directly at our data center. The target response time for services is as little as one hour.
