

WHEN LOCATION MATTERS

**5 REASONS
TO LOCATE YOUR
DATA CENTER WITH
DIGITA IN HELSINKI** 

We enable. You benefit.

DIGITA

5 REASONS TO LOCATE YOUR DATA CENTER WITH DIGITA

1 THE MOST CONNECTED DATA CENTER IN FINLAND

Using a metaphor:
Do you prefer to place your server racks next to an isolated forest trail, or at the crossroads of all major motorways?

We offer you the latter. Our location, right at the center of the Finnish media production campus, is ideal when you need ultra-fast international data connections. Interconnectivity to all major carriers, ISPs, IXPs and other service providers available, helps you form a perfect gateway between the East and the West.

2 FLEXIBLE SERVICES

We know that your needs are not necessarily fixed nor perfectly predictable. Therefore, we offer you several options to make your colocation service more flexible:

- Possibility to customize power supply
- Possibility for customized space
- Nationwide edge locations available, according to your geographical needs
- Remote Hands services

3 DEVOTED CUSTOMER SERVICE

Whenever you need support, you can count on our dedicated service manager being there for you. Someone who knows you and your situation inside out.

4 YOU ARE IN CONTROL 24/7

Naturally, your network and server environments run reliably 24/7 – just like the Finnish TV signal distribution system we manage. But you may also want to check physically that everything is ok. No problem: you will have a 24/7 access to your racks in all our Data Centers.

5 GREENER AND CLEANER

The modern district cooling system we use reduces electricity consumption for cooling purposes up to 90 per cent, thus making colocation at Digita Data Centers a sustainable choice. Digita has also been granted Renewable Energy Certificate from EECS(European Energy Certificate System).

TO SUM UP:

For data caching and compute, Digita Data Center in Helsinki is THE best place to serve customers in the whole Nordic region.

Feel free to tell us what you need, we will find the solution for you.
